DISHWASHING

SureSave[®] Optix DISHWASHING

Attention to detail is paramount for every aspect of the food service industry. Maintaining a consistent wash quality with commercial dishwashers is a common problem, while staining and consumption often impact cost and efficiency.

SureSave[®] Optix VSCOS Dishwashing System solves this problem.

The detergent to water ratio and machine self-cleaning technology ensures that surfactant or stain residue is prevented from forming which leads to outstanding dishwashing results.

SureSave® Optix Dishwashing

Simple and dependable, the SureSave® Optix VSCOS Dish washing System provides quality dish washing at all times, with the cleaning consistency necessary for the food service industry.

Dishwashing Consumables

The SureSave® Optix specially formulated VSCOS dishwash detergent, rinse and potwash solutions are suitable for counter, hood and conveyor commercial dishwashers.

Premium Rinse

SureSave® Optix VSCOS Rinse (Blue Label) works to prevent the formation of water droplets on dishware, ensuring a smear free shine. The product is effective for use with all types of automated washers and produces minimal foam.

Pack Size: 4 x 2L

Premium Dish

SureSave® Optix VSCOS Dish Premium (GreenLabel) is formulated for all dishwashing applications with in excess of a **1000** rack washes per concentrate.

SureSave® Optix VSCOS Pot Plus (Pink Label) is formulated for aluminium and pot wash machine applications.

Pack Size: 4 x 2L

Self Cleaning

The self cleaning technology and descaling additive inhibits the build up of surfactant on the inside walls of the dishwasher tank.

A clean tank provides a clean wash and a clean wash ensures a clean dish.

Stain Removal

SureSave® Optix VSCOS has one of the lowest detergent to water ratios available in the industry today. A low ratio is extremely effective in the removal of tea and coffee stains.

Staining tannins are prevented from attaching themselves on to the detergent residue, which in turn is prevented from being dried back on to the dish.

Unique One-Way Valve

The unique one-way valve and pre-use seal safeguards the chemical contents within the container. This prevents many conventional waste problems, ensuring safety in transportation and storage.

Irremovable Design

The irremovable dispensing container cap provides the consumer with the confidence that the chemicals purchased are being utilised in the correct and controlled way.

Being able to unscrew or remove a cap closure from a container would not provide for this.

Closed Loop System

The SureSave® Optix closed loop arrangement secures and controls its formulation with unrivalled simplicity.

The uniquely calibrated VSCOS low-flow dispensing mechanism, insures accurate dosing at all times, without the need for a water feed, further benefiting the environment.

Level Indication

The container display system provides simple user management control with low level indication as to when a new container needs to be replaced.

Flexible Installation

VSCOS is extremely flexible for installation in either counter, hood or conveyor dishwasher machines.

The innovative design ensures that excess tubing and connections are hidden away, providing a tidy and non-intrusive professional installation.

One-Way Container Control

The unique one-way container bespoke control system safeguards the loading of chemical, eliminating operational error.

Hood / Conveyor / Counter

The wall mounted design is simple and functional, enhancing reliability, performance, ease of use and safety.

The System is compatible with Hood / Conveyor / Counter dishwasher types.
